Proposal

Team:

Group: EN3C04

Name of team: "HelloWorld"

Student Full names: Serikov Abay, Makhmet Dina, Bolat Merey, Kashkimbaeva Gulbanu

Portal logins: 12322, 12363, 12269, 12315

Name of the project: translit.kz

Description: Translit.kz is an online system that may change you Latin letters into Kazakh-Kirill letters (and vice versa). The application will help for everyone who hasn't Kazakh symbols in keyboard and who slowly type Kazakh letters. Also there will be a desktop version, for transliterating in offline state.

Language/Platforms: Java, C#,C++, HTML, PHP, JavaScript, VisualStudio, CSS.

Complexity:

1. The complexity of the project lies in the fact that it is necessary to develop two applications, desktop and web.

2. Desktop program must run in the background, it means, if you turn on an application in all text fields and forms, text editors the text should automatically changed to transliteration

3. The symbols must be changeable, that is, at the request of the user.

(Project is complex, so we think that for every member of team there is enough work)

Customer: Zhasdauren Duisebekov / SDU
